DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* **v.** *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sjoo in view of Karlsson etal. Sjoo discloses all of the subject matter as set forth in the claims and is identical to the invention as broadly recited. Claimed elements clearly disclosed by the reference are: a first part (3), a second part (2), a clamping member (5), male and female mating sections (12, 16) comprising axially irregular surface profiles defined by portions extending to axially different extents and a cutting insert (edge) mounted on the first part which is not numbered. Sjoo lacks the disclosure of the male and the female members being oriented on the interacting surfaces such that the male and female members intercouple only in a single position and the orientation of the male and female members prevents the male and female members from intercoupling in

Art Unit: 3724

another position. Karlsson et al. discloses such an arrangement. It would have been obvious to a skilled artisan at the time of the invention to provide Sjoo with configuration of male and female members as taught by Karlsson et al in order to preclude the male and female members from intercoupling in another position. It is clear that only one unique single position exits for this arrangement as modified due to the unique shape of the cooperating mating surfaces.

Response to Arguments

Applicant's arguments filed 8/21/07 have been fully considered.

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

In response to applicant's arguments against the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988)and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992).

Art Unit: 3724

Further, Karlsson et .al disclose:

Then the lips 30A, 30B of the tool tip are brought by hand into contact with the grooves of the front surface 24. During subsequent rotation of the nut, the tool tip i0 will be firmly drawn rearwardly against the front surface 24, i.e., the position according to FIG. 1 has been achieved. In this position the end surface 16 of the tool tip will not abut against the front surface 24 since the gap L3 is provided therebetween. The gap is L3 is of the magnitude of 0.01 to 0.i mm for avoiding tilting of the tool tip relative to the tool body. The tool tip i0 is now anchored in the drill body 12 in a satisfactory manner.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Willmon Fridie whose telephone number is 571 272 4476. The examiner can normally be reached on Monday - Thursday.

Application/Control Number: 10/609,489 Page 5
